BOOT

HIG: SPI Boot
LOW: Download Boot

RESET

HIG: ESP32 Enable
LOW: ESP32 Off

The diagram illustrates the hardware connections for the ESP32-S3-WROOM-1 module. It shows a 5V supply connected to the CH pin through a 10k resistor. A push-button (KEY-4.5X4.5) is connected between the CH and EN pins. The EN pin is also pulled down to GND with a 10k resistor. The boot pins are connected to a 5V supply through a 10k resistor. The ESP32-S3-WROOM-1 module is shown with its pins labeled. The GND pins are connected to a common ground. The VCC pins are connected to a 5V supply. The EN pin is connected to the CH pin. The BOOT pins are connected to a 5V supply. The module is labeled ESP32-S3-WROOM-1.

The schematic diagram illustrates the SPI interface between the STM32F407VGT6 and the ADXL345. The STM32F407VGT6 is connected to the ADXL345 via the SPI2 pins. The connections are as follows:

- STM32F407VGT6 SPI2_SCK** is connected to **ADXL345 SCLK**.
- STM32F407VGT6 SPI2_MISO** is connected to **ADXL345 DO**.
- STM32F407VGT6 SPI2_MOSI** is connected to **ADXL345 DATA1**.
- STM32F407VGT6 SPI2_NSS** is connected to **ADXL345 CS**.

Power and ground connections are also shown:

- ADXL345 VDD** is connected to **VCC**.
- ADXL345 VSS** is connected to **GND**.
- ADXL345 CS** is connected to **GND**.
- ADXL345 DO** is connected to **GND**.
- ADXL345 DATA1** is connected to **GND**.

Schematic diagram of the LMD3526B261-0FA01 interface circuit. The chip has four pins: 1 (DATA), 2 (L/R), 3 (CLK), and 4 (VDD). Pin 1 is connected to a 100nF capacitor to GND and a 100k resistor to VDD. Pin 2 is connected to a 100nF capacitor to GND and a 100k resistor to VDD. Pin 3 is connected to a 100nF capacitor to GND and a 100k resistor to VDD. Pin 4 is connected to VDD. The chip is labeled LMD3526B261-0FA01. The circuit is powered by a 3.3V supply. The output of the chip is connected to a 100k resistor to VDD and a 100nF capacitor to GND. The output is labeled P21.
